

Plausible ≠ faithful: every interpretability method scored where the truth is known exactly

All 30 methods across the three traditions on the bit-exact VCS, vs the \$1 intervention oracle. The most plausible-looking methods are the least faithful.

Data (read-only, no re-run): faithfulness & plausibility per row from tools/xai_study/compare/out/leaderboard.json (P2-E6-1); faithful+popular contrast from faithful_demo.json (P2-E6-3). Coincident points jittered <0.011
